SUSMITHA THIRUMURU

Full-stack Developer
+91 8121909605 • susmithareddie2309@gmail.com

Summary

Highly motivated and detail-oriented Full Stack Developer with 1 year of professional experience in designing, developing, and deploying web applications. Skilled in front-end and back-end technologies, with a focus on creating seamless user experiences and robust server-side functionality. Proficient in leveraging modern frameworks and tools to deliver scalable and efficient solutions.

Experience

TCS
Bangalore

Assistant System Engineer
02/2022 - 03/2023

TCS is a multinational information technology services and consulting company.

- Worked as Assistant System Engineer at TCS Bangalore.
- Contributed to the development of B2B solutions.
- Involved in building dynamic web applications.

Education

RSR Engineering College

Projects

WebMethods Integration Server Implementation
02/2022 - 03/2023

B2B integration solution using Software AG's WebMethods suite.

- Developed a B2B integration solution using Software AG's WebMethods suite.
- Designed and implemented services to streamline data exchange between systems.
- Managed integrations using My WebMethods Server for enhanced operational efficiency.
- Developed and implemented B2B integration solutions using WebMethods Integration Server, creating custom Flow and Java services to meet client requirements.
- Configured and managed EDI transactions (X12, EDIFACT, XML) and Trading Networks, ensuring secure and efficient data exchange with trading partners.Integrated diverse systems using WebMethods adapters (JDBC, SAP, JMS) and protocols (HTTP, FTP, SFTP, SOAP), enabling seamless cross-platform communication.
- Designed robust error-handling mechanisms and optimized server performance, reducing system downtime and enhancing integration reliability.
- Collaborated with cross-functional teams to gather requirements, deploy integrations, and provide post-implementation support, ensuring timely project delivery.

Projects

Staples Canada B2B Website

02/2022 - 03/2023

Full Stack Developer

- Designed and implemented a robust web application using Spring Boot for back-end services, ReactJS for front-end development, and SQL for database management.
- Developed and integrated secure login and authentication features with protocols such as OAuth 2.0, ensuring user data privacy and platform security.
- Created scalable RESTful APIs using Spring Boot to facilitate seamless data exchange between the client and server, enhancing system efficiency.
- Designed and maintained SQL databases, ensuring efficient storage and retrieval of data, including customer accounts, product catalogs, and order history.
- Worked closely with UX/UI designers and business stakeholders to implement visually appealing, user-friendly designs and align features with business requirements.
- Monitored live systems, resolved post-deployment issues, and implemented feature enhancements based on user feedback to maintain high customer satisfaction.
- Managing codebase through Git, collaborating on features and bug fixes with teams.
- Diagnosing and resolving both front-end and back-end issues quickly to ensure smooth operation.
- Developed RESTful APIs using Node.js to interact with MongoDB for CRUD operations.
- Conducted rigorous testing and debugging to resolve cross-browser compatibility issues, improving platform stability and user satisfaction.
