Education

BCA, GK & CK Bosamia College - Saurashtra University, India 2020 – 2023

Grade : 8.1 Cgpa

Professional Experience

Frontend Development Intern, Radicalloop (Nov -2022)

- Worked as an Intern making my skills shine on web designing and mobile responsive of the websites
- Making of pixel perfect templates from figma to production ready code using HTML & CSS.
- Started Javascript development of application on client side and implemented various task related to CRUD using vanilla JS.

Frontend Developer, Radicalloop (Present)

- Worked in Frontend development with react js , next.js and tailwind as my core stack, implemented authentication module from scratch using backend Rest Api as interface and handling axios interceptors.
- Handled Pagination with custom logic from front using next token as API response.
- Handled Integration of Amazon AWS bucket for user profile upload on Profile Module
- Handled Chart.js library for creating a custom dashboard inside a next.js application integrating the api to showcase the accurate results accordingly
- React-Query based api fetching and mutating and state managment for managing query on server side for managing the states globally.
- Also implemented designing inside react-native

Skills

HTML • **CSS** — Tailwind CSS • **Figma to Html** — Responsive Design • **JS** • **TypeScript** • **React.JS** • **Next.JS** • **React Query** • **Zustand** • **Redux** • **Github** • **Amazon Aws Client Side Integration** • **Express Js** • **Node Js** • **Mongo Db** • **Mongoose** • **Docker** • **Firebase**

Projects

Confidential, Admin panel

- Have implemented the custom pagination reusable module across the application maintaining the limit and offset
- Have built application with multiple User Roles from scratch
- Have worked on the product from scratch maintaining and optimising it having various features of booking a seat and downloading pdf , also implemented AWS cognito to fulfil the client requirements.
- Also have worked with functionalities such as OTP during forget password with the help of AWS cognito,
- Worked on CRUD implementation in small scale application also applied dashboard analytics using Chart.JS
- Have worked on application with the multiple field search from client side also have handled filtering from client side

Expense tracker, Mern project

- Developed a web-based expenses tracker application using the MERN (MongoDB, Express.js, React.js, Node.js) stack.
- Implemented user authentication and authorization using JWT (JSON Web Tokens) for secure access.
- Designed a user-friendly interface for tracking and managing expenses, including CRUD operations for expenses and groups.
- Integrated pagination and search functionalities for efficient data retrieval and organization.
- Implemented split-wise functionality for sharing expenses within groups, including edit and delete operations.
- Utilized cloud-based services (e.g., AWS for server deployment) to ensure scalability and reliability.
- Frontend: React.js, HTML, CSS, JavaScript
- Backend: Node.js, Express.js
- Database: MongoDB
- Other: JWT for authentication, AWS for server deployment

Chat app

- Developed a real-time chat application using Node.js, React.js, MongoDB, Express.js, and Socket.io.
- Implemented user authentication, one-on-one chat, and group chat functionalities.
- Leveraged Docker for containerization and Redis for caching and session management.
- Integrated Apache Kafka for asynchronous messaging and ensured reliability in distributed systems.
- Overcame challenges such as scalability and performance optimization.
- Played a key role in the project, contributing to its successful implementation.
- Future enhancements include exploring additional features to enhance user experience and system functionality.

Upside

I have implemented product from scratch for homeowners and agents called Upside majorly used in United States, Let me give you a vague idea about the application, In the product I have worked on multiple role account and user accounts where I have maintained the CRUD of home owner's property and also integrated the Part for agents , buyers , seller etc. hence there are many terms flying high let me clarify it

Homeowners are one who have agents assigned to sell their properties
Investors are rather I say buyer who buys the property
Sellers who are directly selling the properties without agents assigned
Agents are kind of br
okers
